EDUCATION

Minia National University
Bachelor of Computer Science and Artificial Intelligence
2024 – 2028

TECHNICAL SKILLS

Languages: C++, C#, Python, JavaScript, HTML/CSS
Systems & Infra: Windows Server, Active Directory (DNS/DHCP/GPO/IIS), Linux (Ubuntu, Kali, Parrot), VMware Workstation
Networking: Cisco IOS, static routing, LAN/WAN design, Packet Tracer
Cloud & DevOps: Microsoft Azure (AZ-900 learning path), Docker, Git & GitHub, GitHub Actions (CI), xUnit
Other: SQL Server, OOP, Data Structures, .NET / WinUI 3

COURSES

- CCNA (Cisco Networking) Fundamentals
- Ethical Hacking (CEH) Fundamentals
- Microsoft Azure Fundamentals (AZ-900 learning path)
- Linux (Kali, Parrot, Ubuntu) Fundamentals
- Command Line Interface (CLI)
- Computer Hardware Fundamentals
- Operating Systems Fundamentals
- Arduino Fundamentals
- Oscilloscopes Fundamentals

LANGUAGES

Arabic — Native
English — C1
Spanish — A2

INTERPERSONAL SKILLS

Creative & Critical Thinking · Adaptability · Teamwork · Time Management · Work Under Pressure · Self-Learner

PROFILE SUMMARY

Computer Science & Artificial Intelligence student with hands-on experience across systems administration, networking, and DevOps tooling. Built and documented an Active Directory / Windows Server lab, a Cisco multi-LAN routed network, and an open-source Windows download manager with a full CI pipeline. Comfortable across Linux and Windows environments, Git-based workflows, and cloud fundamentals (Azure). Self-driven learner who ships and documents real projects rather than tutorials, aiming to grow into a DevOps / Infrastructure engineering role.

FEATURED PROJECTS

Active Directory & Windows Server Infrastructure Lab

VMware Workstation · Completed

- Designed and built a small-organization AD/Windows Server environment: AD DS, DNS, DHCP, OUs, Users/Groups, GPO, and IIS, with domain-joined clients.
- Structured as a documented, portfolio-ready GitHub repo (architecture, diagrams, troubleshooting log) rather than a one-off lab.

Full Download Manager (FDM)

C#, .NET 10, WinUI 3 · Open source, in active development

- Open-source Windows download manager with a modular architecture (Core / Downloader / Network) and full documentation set (README, CONTRIBUTING, ROADMAP, SECURITY).
- Set up automated testing (xUnit) and a GitHub Actions CI pipeline running build + tests on every push/PR.

Cisco Networking Portfolio — Multi-LAN & Multi-Router WAN

Packet Tracer · 2 projects completed

- Multi-LAN Routed Network: 2 routers, 2 switches, 2 LANs, and a serial WAN link, with a self-designed IP addressing plan and static routing.
- Multi-Router WAN: multi-site company network (HQ, core, and two branches) with multi-hop static routing, VLSM addressing, /30 serial links, and a separate server subnet. Part of a planned 10-project series, documented on GitHub with configs and diagrams.

Infrastructure Health Checker

v1.0.0 · Stable release

- Shipped a first stable release (v1.0.0) of a system/infrastructure health-checking tool as part of an ongoing portfolio of infrastructure and automation utilities.

Linux Server Operations Toolkit

Bash · Ubuntu/Debian · In progress

- Bash CLI toolkit for Linux server administration (users, services, backups), designed around safety: dry-run mode, logging, idempotent operations, and strict error handling. Built with a phased Git workflow; ShellCheck-based CI is planned.

OTHER PROJECTS

- Network Scanner Tool — Python-based IP validation and port scanning utility.
- Product Management System — web-based product tracking app (HTML, CSS, JavaScript).
- Additional GitHub repos: Log Analyzer, Backup Automation Tool, Linux Monitoring Tool, File Operations Toolkit.
